MEMORANDUM

Date: APR 2 1991

SUBJECT: REVIEW OF THE "FINAL FEASIBILITY STUDY REPORT, MARCH 1991"
AND THE "RESPONSE TO EPA COMMENTS (DATED FEBRUARY 5, 1991)
ON THE: DRAFT FEASIBILITY STUDY REPORT MEDLEY FARM
SUPERFUND SITE," GAFFNEY, SOUTH CAROLINA.

TO: Jon K. Bornholm
Remedial Project Manager
North Superfund Remedial Branch

FROM: Tony Able, Hydrologist, P.G. *T.A.*
Ground-Water Technology Unit

Per your request review of the subject document has been completed. Specifically I checked to be sure that comments from my review of the Draft FS Report were addressed. The majority of the comments were addressed and the others were deferred to the Remedial Design.

In table 4.2 the remediation level for 1,1-dichloroethane was not changed from 3500 ppb to 350 ppb as was stated in my February 1, 1991 comments. 350 ppb is the concentration calculated from the reference dose (RfD) in the EPA 4th quarter (1990) Health Assessment Summary Tables (HEAST) using a 10-fold safety factor because 1,1-DCA is a Class C carcinogen.

If you have any questions concerning this matter contact us at extension 3866.
